

### **JInitiator and Internet Explorer v8**

If you have upgraded your Internet Explorer (IE Browser) to v7 or 8, chances are that you will no longer be able to access eSIS (report card and other functions).

IEv8 breaks JInitiator therefore breaking eSIS.

To fix this problem you will need to replace the current "jvm.dll" on your computer with this version.

The pre-existing "jvm.dll" is located in either:

- C:\Program Files\Oracle\JInitiator 1.3.1.13\bin\hotspot

or

- C:\Program Files\Oracle\JInitiator 1.3.1.22\bin\hotspot

From your computer you will need to navigate to one of these folders and drop the attached/current "jvm.dll" in the folder, thus replacing the old one.
